

Dice Simulator Report

Throws: 20 | Dice: 1 die

Results

Throw	Die	Result
1	6	6
2	3	3
3	4	4
4	6	6
5	3	3
6	6	6
7	4	4
8	5	5
9	1	1
10	6	6
11	6	6
12	3	3
13	3	3
14	6	6
15	2	2
16	6	6
17	5	5
18	2	2
19	2	2
20	3	3

Analysis Questions

1. What is the distribution of total results?

Result 1: 1 times Result 2: 3 times Result 3: 5 times Result 4: 2 times Result 5: 2 times Result 6: 7 times

2. What is the most and what is the least frequent result?

Most frequent: 6 (7 times). Least frequent: 1 (1 times).

3. What is the empirical probability of rolling each number?

Result 1: 5.00% Result 2: 15.00% Result 3: 25.00% Result 4: 10.00% Result 5: 10.00% Result 6: 35.00%

4. What's the average, min, and max result?

Average: 4.1 | Min: 1 | Max: 6

5. How evenly distributed are the results of a single dice?

Max count difference between faces: 6 — results are not evenly distributed.

6. What percentage of rolls were doubles?

Not applicable when throwing one die.

7. What are the percentage of having pairs (even results)?

60.0% of results were even numbers.

8. What are the percentage of having odds?

40.0% of results were odd numbers.
